

SEMINARIUM Z MAGNETYZMU I NADPRZEWODNICTWA

Uprzejmie zawiadamiamy, że w **środę**

31 stycznia 2024 r., o godz.10:00

odbędzie się seminarium w **sali 203, budynek I**

na którym

dr hab. Maciej Zgirski

(*Instytut Fizyki PAN, Warszawa*)

wygłosi referat na temat:

“Quantum thermodynamics with a single superconducting vortex”

We introduce the Single Vortex Box (SVB) - a nanodevice that allows to treat a single superconducting vortex as a macroscopic, albeit quantized "particle", which can be created and annihilated with pulses of electrical current. Our pioneering demonstration is a pivotal step towards the development of the vortex electronics i.e. memory cells, superconducting diodes, and logical elements. Using the method of fast time-resolving switching thermometry [1], we measure the temperature rise and the subsequent thermal relaxation of the SVB resulting from the expulsion of just a single magnetic field vortex. Our experiment thus provides a calorimetric estimation of the dissipation in a superconductor due to a single moving vortex. This is a feat of the fundamental importance that has never been accomplished before, which belongs to the emerging field of the experimental quantum thermodynamics.
